310	Pneumatic Lithotripter Set	Used via a rigid or semi-rigid endoscope with a straight working channel for the fragmentation of urinary (i.e., kidney, ureters, and bladder) tract stones. The Stonebreaker is a portable intracorporeal contact lithotripter that is powered by high-pressure carbon dioxide gas (CO2). The Stonebreaker lithotripter generates a mechanical shock that transfers kinetic energy to the tip of the probe, which is placed in direct contact with the stone. The minimal movement of the probe allows stone fragmentation and may decrease the risk of stone migration.
